

Story-at-a-Glance

EECP (Enhanced External Counterpulsation) treatment is advanced, non-invasive, day care procedure.

It is approved by US FDA and Tamilnadu introduce this program in all government medical colleges and hospitals.

This treatment is available in private hospitals and teaching medical institutions.

What Is Vaso-meditech Eecp Treatment? Is It An Approved Treatment?

The expansion for EECP is Enhanced External counter pulsation. Enhanced means it is advanced version, External means it is completely outside the body, it was not an invasive procedure, surgical procedure or any needling injection. Counter means it counters the heart function, (for example) when the heart tries to pump the blood, the cuffs which is placed outside in the leg deflates. So that it able to receive the blood from the heart.

When the heart goes for the dilatation or the diastolic phase, the cuff inflates pushing the blood into coronary circulation. So it is called counter. and pulsation,

it is the blood flow into the blood vessels in a pulsatile manner because the heart pumps in systole and diastole. So similarly the inflation and deflation send a pulsatile blood flow into the vascular system. So it is called counter pulsation. EECP is a completely outpatient procedure in that patient doesn't have to get into hospitalization. It is called as day care procedure, every day the patient come for one hour treatment procedure and after that one hour they will stay for 15 minutes to do some vital examinations like blood pressure, pulse oximeter to access the oxygen saturation and monitor heart rate and then they go back to home.

This treatment also provide as a 2-session per day. So that It can be complete In 15 days, usually the protocol is 35 days, 6 days a week, coming for six weeks. So whether this treatment is approved yes the treatment is US FDA.

The US, FDA as cleared enhanced external counter pulsation for cardiac alignment. Which include heart attack, cardiogenic shock, heart failure and patient who are having angina which is called chestpain. Recently in 2012 and 2013 many research papers available. The clinical validation and scientific literature is growing. The American college of cardiology and European society of cardiology includes EECP into its guideline and now EECP is mentioned in many textbook.

After introduction of EECP in India for about 5 years or more than 5 years many insurance company is covering EECP as an outpatient treatment for eligible cardiac patient and now the Tamilnadu government has initiated a program, where this EECP treatment is provided in all the government medical colleges, hospital through vaso-meditech heal your heart company as a public private partnership.

So this treatment has been validated by clinical literature with more than 200 publications. And now also available in teaching medical institution in many part of India. So obviously is an approved treatment for patient with angina and heart failure.
